

Denys Osadchyi

AI Design Engineer · Ships products, not mockups · Design Systems · Founder @ MD Academy

15+ years in product design · I build the open-source Claude Code ↔ Figma tooling that designers use.

SKILLS

AI Design Engineering: generative design tooling (mockup / layout generators), human-in-the-loop Claude Code pipelines, AI-assisted tokenization, autonomous agents, daily AI design loop.

Design Systems: build from scratch, tokens & multi-mode theming, Ant Design / MUI / Chakra, Figma Variables, Storybook adoption.

Front-End: React, Next.js 14, TypeScript, Tailwind, Chakra v3, Ant Design, MUI, Storybook, Tauri, Vite, Vercel.

Infra & DevOps: Linux server admin, Docker, deployment & CI, Playwright (E2E / visual), shell, cron.

AI & Code: Claude Code, Python, Shell.

Design: Figma (advanced), Variables, design tokens, Style Dictionary, WCAG AA, Framer.

Domains: DevOps / IaC / Cloud, Developer Tools, B2B SaaS, Fintech, DAM, MarTech.

EDUCATION & LANGUAGES

BSc, Optics and Lasers Engineering
Vinnytsia National Technical University (2003–2008)

Languages: English (C1) · Ukrainian (native)

SUMMARY

AI Design Engineer who builds the AI workflows that change how design teams work, and separately creates open-source tools for designers. I bring deep expertise in product design, building products from scratch, and design systems, backed by 15+ years across B2B SaaS, DevOps, fintech, and DAM. I teach a new generation of designers design engineering, showing how to take an idea from concept to production using modern AI workflows in Claude Code. Beyond product design, I build production-grade front-ends myself and manage my own infrastructure: Linux servers, Docker, and deploy pipelines. I work where design and code stop being separate stages.

EXPERIENCE

Product Designer + Design Engineer (Contract)

2026

Records Marine · B2B marine marketplace · Next.js 14 · Chakra v3 · TypeScript · Docker · Playwright · Claude agent

Design contract for a B2B marine marketplace. The business needed mockups fast and cheap to iterate; the team needed aligned design-to-development processes. Solo, I designed and built **LayoutLab**, an internal AI mockup generator: a designer describes a screen in plain words and gets back not a static picture but a real, working screen assembled from the same components as the product itself, ready for code, with nothing for developers to redraw. In parallel, I helped the design team build and improve their **design-system and developer-handoff processes**: a single source of truth with aligned components and tokens. **Result:** iterations dropped from a week to hours, one artifact instead of two (no Figma-to-code rebuild), and fewer design-to-dev inconsistencies.

Founder & AI Design Engineer · MD Academy

2026 – Present

Independent

Founded **MD Academy**, live cohort courses that teach designers to run the full product pipeline in Claude Code: Design Engineering Beginners (6 lessons) and Pro Max (12 lessons). **80+ students** across all courses, plus ~5 conference talks. Ran an AI-pipeline course for the in-house design team at **Silpo** (a major Ukrainian retailer), covering AI-assisted design engineering and design-token workflows.

TEACHING & SPEAKING

- **Founder & instructor, MD Academy:** Design Engineering Beginners & Pro Max; earlier ran "AI Workflow for Designers" (2 sold-out cohorts).
- **Conference speaker (~5 talks):** design systems, AI-assisted dev, vibe coding (TIRED, UNIED / Planet of Design, SHIFT'26).
- **Featured in dev.ua** & by **ActiveCollab** as a workflow case study.

SHIPPED PRODUCTS

figmosha2

Claude Code ↔ Figma bridge powering MD Academy's courses, used by designers across cohorts.

github.com/denysosadchyi/figmosha2

ux-auditor

Repeatable UX-audit toolkit: bilingual playbook, Claude Code skills, Playwright capture.

github.com/denysosadchyi/ux-auditor

styles-to-token-migration

Pipeline migrating Figma Paint Styles to semantic Variables.

github.com/denysosadchyi/styles-to-token-migration

yamleer

YAML-first **layout/screen generator**: tokens & screens compile to standalone HTML, no build.

github.com/denysosadchyi/yamleer

job-searcher

Autonomous Claude Code agent that scores vacancies and ships features overnight, human-reviewed.

github.com/denysosadchyi/job-searcher

VOLUNTEERING

Refurbishes & delivers computers to Ukrainian military units. Runs a home shelter for street cats.

EXPERIENCE (CONTINUED)

UX / Senior Product Designer · Scalr

Mar 2022 – Mar 2026

Built a design system from scratch for a Terraform/OpenTofu DevOps platform (components, light/dark tokens, single source of truth), then migrated it to Ant Design (React) mid-lifecycle. Designed features end-to-end on real DevOps mental models (workspaces, run pipelines, policy, environments). Built an AI tokenization pipeline (custom Figma plugin + Claude Code) that assigned Variables to every layer: **migrated 50+ components, manual work → minutes**. Worked daily with front-end engineers, reviewing implementation and supporting Storybook. **Result**: a design system engineers actually adopted (~4-year arc), fewer design-to-dev inconsistencies, faster delivery.

Founder & Design Director · Nerdfox Design

Feb 2018 – Oct 2023

Founded and ran a 5-designer product agency: shipped **10+ products from zero** across SaaS, fintech, DAM, and MarTech for EU/UK/UAE clients, working with founder- and C-level stakeholders. Example: an EU fintech reached investment readiness on time with **~30% early scope reduction**. Closed intentionally in 2023 to go deeper as an IC.

Senior Product Designer · Daminion (Part-time)

Jul 2019 – Apr 2022

Full redesign of an on-premise Digital Asset Management platform used by **800+ companies**: IA, core workflows, and a light/dark design system across the legacy Windows and web apps.

Senior Product Designer · Sociaro (Part-time)

May 2019 – Mar 2022

Redesigned the website and core UX/UI for an ML-powered ad-analytics product; built and maintained its product design system.
